

Application Development

Building and implementing internet based business applications is not limited to large organizations with substantial budgets and technical staff. Small to mid-size firms can competitively leverage their existing information with cost effective on-line systems.

Enhancing Sales Efforts

- ◆ Sales Reps or Distributors can place orders on-line without the need for phone calls, mail or fax, with most data entry completed on the order site. Details can be sent to spreadsheet or text formats to interface with your current systems.
- ◆ As orders are placed a complete history is maintained so that marketing information, sales statements and order detail is readily available to support sales.
- ◆ Management reporting is available online as needed and information can be downloaded into Excel.

Customer Service & Support

- ◆ Customers can place orders on-line without staff involvement: easy order placement encourages re-orders
- ◆ Client menus and services can be added to provide contact lists, new product introductions, or help requests
- ◆ Order status or history can be provided with information previously entered by the client

Company Communications

- ◆ Distribute employee information company wide
- ◆ Contact information is in one location and easily updated
- ◆ Department documents may be managed in a single repository
- ◆ Inventory levels, production schedules, and other components can be made available to specific groups

Application Development

Applications developed with Adobe / Macromedia's ColdFusion and Microsoft SQL bring the power and flexibility of a web based solution to true, complex business systems.

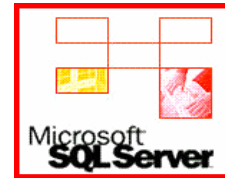

Coldfusion Application Server

- ◆ Cost effective, robust data driven web pages
- ◆ Flexible information reporting
- ◆ Scalable, high performance functionality
- ◆ Security features for sensitive data

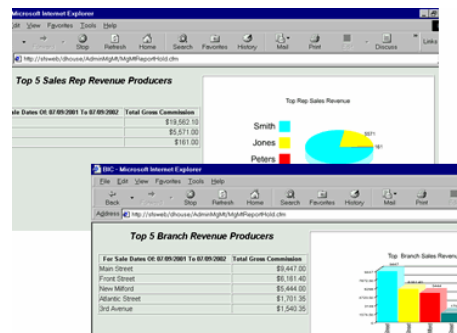

Microsoft SQL Server

- ◆ Industry standard database management system
- ◆ Appropriate for a broad range of solutions, including e-commerce, data warehousing and line of business applications

Browser Based Applications

- ◆ Internet or Intranet deployment
- ◆ Business reporting applications
- ◆ Intuitive online data entry systems
- ◆ Sales Representative support
- ◆ Executive information systems

JTechWorks can develop powerful browser based applications that meet your unique needs

- ☞ Develop custom solutions
- ☞ Web enable current applications
- ☞ Deploy web data entry systems
- ☞ Update existing applications
